Category Name Design **Actionee** HAIS
Sub Category
Subject Automatic Initiation of Ground Scripts

Description of Problem or Suggestion:

If the user creates the ground script ahead of time, why is there no mechanism to start it up unless the user specifically initiates it? Even if it is too early to determine if FOT would like the ground scripts to start automatically or not, couldn't it at least be a user option?

Originator's Recommendation

Make it a configurable option for auto/non-auto start of scripts. This optional selection should probably apply to other features/tolls as well.

HAIS Response Date 1/24/95

The FOT has indicated in strong terms that they would not like this feature (ground script initiation) automated. The FOT must retain tight unambiguous control over when a ground script executes and which ground script executes, for nominal and non-nominal real-time Spacecraft command support.

The design does not preclude this from being added at a later date if operational concepts evolve to a point where this is desirable.
